Preamble

Following is a listing of all the total number of images used for each of the versions for Software Audio WorkShop and Software Audio Console under their specific bit types. This listing may be helpful for those that use shades as the increase in the total number of images would have an adverse effect on the version that was used when the shade was being originally developed. As can be seen, only Software Audio Console would be affected by these various versions changes. In particular, please make note of those sections highlighted in yellow for Software Audio Console.
